

Notes

1. You can rename the course name and its codes, remove a course, or add a new one and specify the type (university, collage, departmental, optional, rotations) as you want.
2. If the prerequisite to is two codes, it's important to follow this:
 - preTo, preTo: separate them by comma
 - b. preTo | co req: separate them by pipeline
3. When modifying any flowchart, ctrl+p to save it as a pdf from chrome with a name then save it in the PDFs folder.

How to Add a New Flowchart

1. Go to index.html and add its div like this (<div tabindex="0">Bussiness</div>).
2. Go to the data folder and create a new json file with the same name as the div you put in the index.html (Bussiness.json) and copy the template from any other similar json file.
3. If there are two pre to codes, separate them by comma and if there are both pre to and co req codes, separate them by pipeline.
4. If the code of the elective course is just credits like 3 CH, it must be inside two brackets like (3 CH).
5. If the course is rotations, write it the same way as the one in mls.json
6. Done. Run it and ctrl+p to save it as a pdf from chrome with the same name as the departmentName name then save it in the PDFs folder.
7. Now you can check the Download PDF button.
